

ACTIVITIES:

TOPIC: How did we start visiting outer space?

- 1.- Before reading, answer the following question: What do you know about astronauts?
- 2.- Read this text about Laika.

Laika

During the era of the space **race** between the USA and USSR, the Soviet Union **launched** the first living thing into space. It was a dog named Laika. The objective of the trip was to prove that space travel for humans was safe, but technology hadn't advanced enough to bring ships back yet. Laika was a street dog that became an astronaut because of her size and calmness. After some training, she was ready to go into space. Her ship, called Sputnik 2, was launched on November 3, 1957. Laika was supposed to orbit the planet some days and the first reports from Russian space programs said so. However, in 1993, some Russian space program scientists revealed that Laika died soon after leaving the planet's atmosphere because of stress and **overheating**. Many people in the world were in great **sorrow** because of her death. Since then, her story has spread around the world and has inspired many **tales**, songs, and poems. Some of them say that Laika became a star in the sky.
